### 3RW soft starters

#### High Performance soft starters

##### 3RW55 soft starters

- TIA integration optional
- Plug-in communication modules for PROFINET, PROFIBUS and Modbus
- Removable HMI module with color display, local interface and slot for a micro SD memory card
- Extended protection functions
- Up to 560 kW at 400 V (can be used in supply systems up to 690 V)
- Automatic parameterization for simple commissioning and reliability even under changing load conditions
- Hybrid switching devices and three-phase motor control for minimum power loss and optimum/symmetrical motor control
- Pump stop for reduced mechanical stress and optimum pump stop control

6/12

##### 3RW44 soft starters

- TIA Integration optional
- PROFIBUS and PROFINET
- Integrated display
- External display/control module optional
- Extended protection functions
- Up to 1200 kW at 400 V (can be used in supply systems up to 690 V)

6/27

#### General Performance soft starters

##### 3RW52 soft starters

- TIA integration optional
- Plug-in communication modules for PROFINET, PROFIBUS and Modbus
- HMI modules optional
- Soft starting and stopping
- Current limiting
- Motor overload protection
- Up to 560 kW at 400 V (can be used in supply systems up to 600 V)
- Hybrid switching devices and three-phase motor control
- Soft Torque for reduced mechanical loading and optimum pump stop control
- Parameterization using potentiometers

6/42

#### Basic Performance soft starters

##### 3RW40 soft starters

- Soft starting and stopping
- Current limiting
- Motor overload protection
- Up to 250 kW at 400 V (can be used in supply systems up to 600 V)

6/56

##### 3RW30 soft starters

- Soft starting with voltage ramp
- Up to 55 kW at 400 V (can be used in supply systems up to 480 V)

6/71

#### Use of soft starters in conjunction with IE3/IE4 motors

##### Note:

For the use of SIRIUS 3RW soft starters in conjunction with highly energy-efficient IE3/IE4 motors, please observe the information on dimensioning and configuring, see [Application Manual](#).

### SIRIUS solid-state switching devices for switching resistive/inductive loads

#### Solid-state relays

##### Solid-state relays

- Widths of 22.5 mm and 45 mm
- Compact and space-saving design
- "Zero-point switching" version
- Mounting onto existing heat sinks

<b>3RF21</b>	6/99
<b>3RF20</b>	6/104
<b>3RF22</b>	6/108

#### Solid-state contactors

##### Solid-state contactors

- Complete units comprising a solid-state relay and an optimized heat sink, "ready to use"
- Compact and space-saving design
- Versions for resistive loads "zero-point switching" and inductive loads "instantaneous switching"
- Special versions "Low Noise" and "Short-Circuit Proof"

<b>3RF23</b>	6/112
<b>3RF24</b>	6/122

#### Function modules

For extending the functionality of the 3RF21 solid-state relays and the 3RF23 solid-state contactors for many different applications:

##### Converters

- For converting an analog input signal into an on/off ratio; can also be used on 3RF22 and 3RF24 three-phase switching devices

<b>3RF2900-0EA18</b>	6/133
----------------------	-------

##### Load monitoring

- For load monitoring of one or more loads (partial loads)

<b>3RF29...-0FA08, 3RF29.0-0GA..</b>	6/134
--------------------------------------	-------

##### Heating current monitoring

- For load monitoring of one or more loads (partial loads); remote teach

<b>3RF29...-0JA..</b>	6/135
-----------------------	-------

##### Power controllers

- For setting the current by means of a solid-state switching device depending on a setpoint value set by the power controller. There is a choice of full-wave control and generalized phase control.

<b>3RF29...-0KA.</b>	6/136
----------------------	-------

##### Power regulators

- For regulating the current by means of a solid-state switching device, depending on a setpoint value set by the power regulator. Closed-loop control: full-wave control or generalized phase control

<b>3RF29.0-0HA..</b>	6/137
----------------------	-------

### SIRIUS solid-state switching devices for switching motors

#### Solid-state contactors

##### Solid-state contactors, solid-state reversing contactors

- Complete units in the insulated enclosure with integrated heat sink, "ready to use"
- Compact and space-saving design
- Version for motors, "instantaneous switching"

<b>3RF34</b>	6/142, 6/146

✓ Function available

-- Function not available

1) Inside-delta circuit only up to line voltage 600 V.

2) Note derating above 40 °C.

3) Only soft starting available for 3RW30.

4) Calculate soft starter and motor with size allowance where required.

5) When using the motor overload protection according to ATEX, an upstream contactor is required.

6) Special device versions only.

7) Not possible in inside-delta circuit.

8) With software Soft Starter ES (TIA Portal).

9) Only in conjunction with special accessories.

**Constraints**

The 3RW soft starters should always be designed on the basis of the required rated operational current of the motor. The motor ratings listed in the selection and ordering data are rough guide values and designed for basic starting conditions (CLASS 10). For other starting conditions we recommend the Simulation Tool for Soft Starters (STS).

Motor rating data in kW and hp is based on IEC 60947-4-1.

At an installation altitude above 2 000 m, max. permissible operational voltage is reduced to 480 V.

Installation altitude for SIRIUS 3RW soft starters

The selection and ordering data were determined for the following constraints (stand-alone installation without additional fan)

SIRIUS soft starters	High Performance 3RW55	3RW44	General Performance 3RW52	Basic Performance 3RW40	3RW30
<b>Constraints</b>					
<b>Maximum starting time</b>	s 20	10			3
<b>Maximum starting current in % of motor current</b>	$I_e$ 300				
<b>Maximum number of starts per hour</b>	1/h 5				20

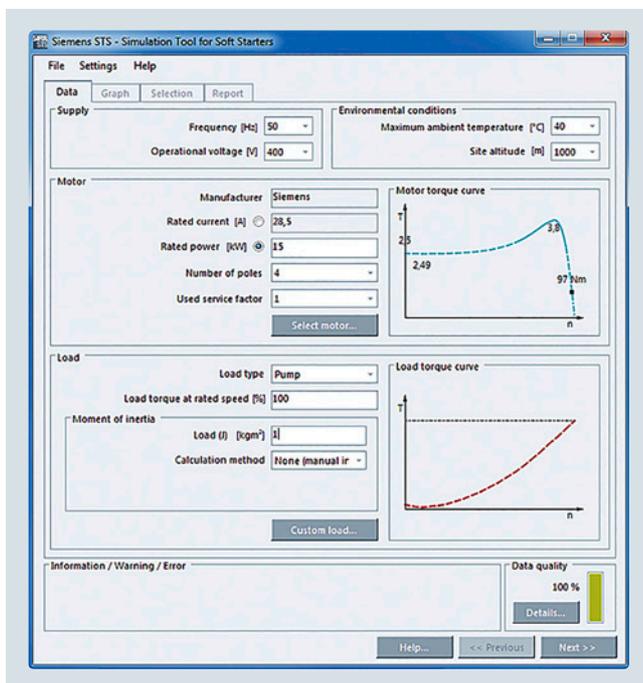

Simulation Tool for Soft Starters (STS)

The Simulation Tool for Soft Starters (STS) provides a convenient means of designing soft starters using a simple, quick and easy-to-use interface.

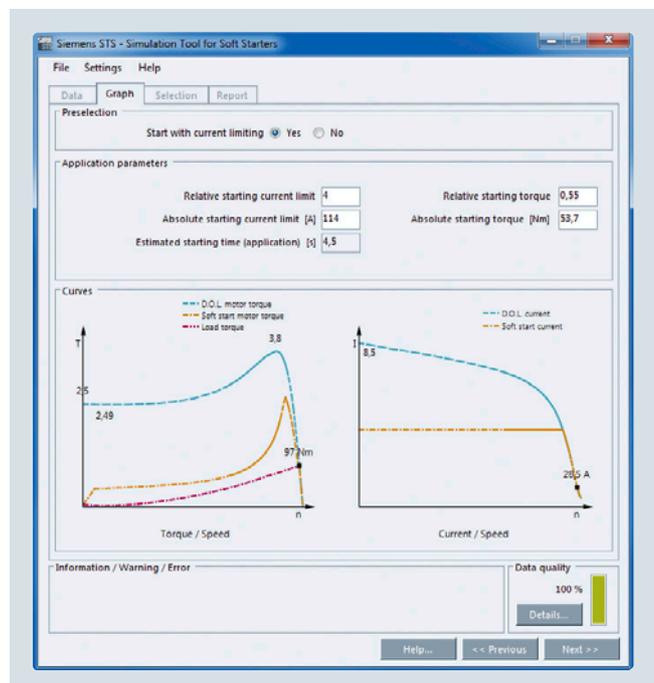

Entering the motor and load data will simulate the application and prompt suggestions for suitable soft starters.

Link to the free download of the [Simulation Tool for Soft Starters \(STS\)](#).

- Simple, quick and user-friendly interface
- Detailed and up-to-date Siemens motor database, including IE3 and IE4 motors.
- Simulation of heavy starting up to CLASS 30
- Update-capable (e.g. motors, load types, functions)
- Fast simulations with minimum input data
- Immediate, graphical curve charts of start operations with limit values
- Table view of suitable soft starters for the application

Easy input of motor and load data

Graphic display of start operations

## SIRIUS 3RW Soft Starters

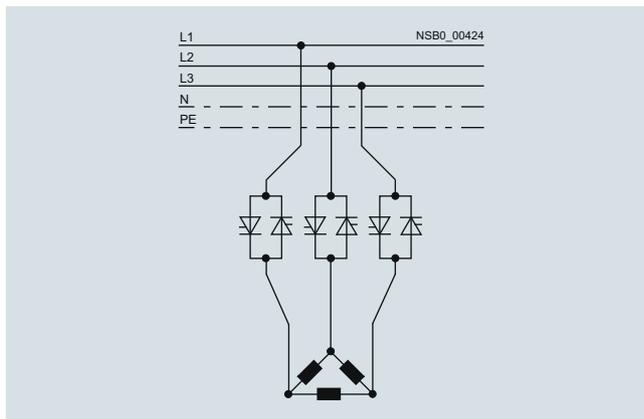

### General data

#### Circuit concept

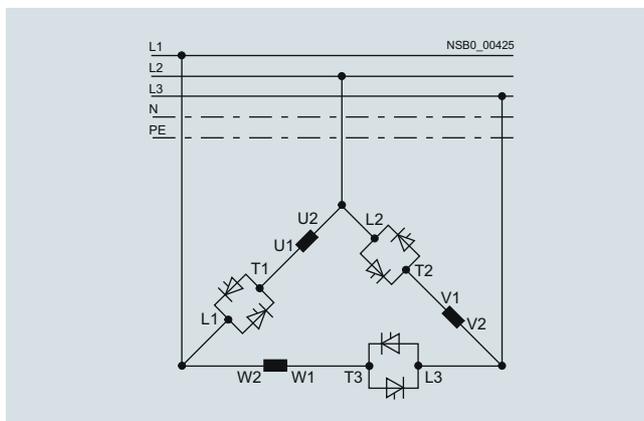

Three-phase controlled SIRIUS 3RW soft starters can be operated in two different types of circuit:

- **Inline circuit**  
The controls for isolating and protecting the motor are simply connected in series with the soft starter. The motor is connected to the soft starter with three leads.
- **Inside-delta circuit**  
The wiring is similar to that of wye-delta starters. The phases of the soft starter are connected in series with the individual motor windings. The soft starter then only has to carry the phase current, amounting to about 58% of the rated motor current (conductor current).

#### Comparison of the types of circuit

Inline circuit: Rated current  $I_e$  corresponds to the rated motor current  $I_n$ , three cables to the motor

Inside-delta circuit: Rated current  $I_e$  corresponds to approx. 58% of the rated motor current  $I_n$ , six cables to the motor (as for wye-delta starters)

#### Which circuit?

Using the inline circuit involves the lowest wiring outlay. If the soft starter to motor connections are long, this circuit is preferable.

The wiring complexity is twice as high when using the inside-delta circuit, but a smaller device can be used with the same rating. Thanks to the choice of operating mode between the inline circuit and inside-delta circuit, it is always possible to select the most favorable solution.

The braking function is possible only in the inline circuit. The inside-delta circuit cannot be used in 690 V line supplies.

#### Configuration

The electronic 3RW soft starters are designed for normal starting. In case of heavy starting or increased starting frequency, a larger unit must be selected. The 3RW44 and 3RW52 soft starters may be used in isolated supply networks (IT systems) up to 600 V AC and the 3RW55 soft starter even up to 690 V.

For long starting times it is recommended to have a PTC sensor or temperature switch in the motor. This also applies for the "torque control", "pump stop" and "DC braking" stopping modes, because during the stopping time in these modes, an additional current loading applies in contrast to coasting down.

No capacitive elements are permitted in the motor feeder between the SIRIUS 3RW soft starter and the motor (e.g. no reactive-power compensation equipment). In addition, neither static systems for reactive-power compensation nor dynamic PFC (Power Factor Correction) must be operated in parallel during starting and ramp-down of the soft starter. This is important to prevent faults arising on the compensation equipment and/or the soft starter.

All elements of the main circuit (such as fuses and controls) should be dimensioned for direct-on-line starting, following the load short-circuit conditions. Fuses and switching devices must be ordered separately. The harmonic component load for starting currents must be taken into consideration for the selection of motor starter protectors/circuit breakers (selection of release). Please observe the maximum switching frequencies specified in the technical specifications.

#### Notes:

When three-phase motors are switched on, voltage drops occur as a rule on starters of all types (direct-on-line starters, wye-delta starters, soft starters). The infeed transformer must always be dimensioned such that the voltage dip when starting the motor remains within the permissible tolerance. If the infeed transformer is dimensioned with only a small margin, it is best for the control voltage to be supplied from a separate circuit (independently of the main voltage) in order to avoid the potential switching off of the soft starter.

For dimensioning soft starters, we recommend our Simulation Tool for Soft Starters (STS), [see page 6/7](#) or our Technical Support:

<https://support.industry.siemens.com/My/ww/en/requests>

Recommended parameters for the initial commissioning of our SIRIUS 3RW soft starters are listed in every report of our Simulation Tool for Soft Starters (STS). In addition, our High Performance soft starters provide support by means of their commissioning wizards.

### Motor feeders with soft starters

The type of coordination according to which the motor feeder with soft starter is mounted depends on the application-specific requirements. Normally, fuseless mounting (combination of motor starter protector and soft starter) is sufficient.

If type of coordination "2" is to be fulfilled, then semiconductor fuses must be fitted in the motor feeder.

ToC  
1

Type of coordination "1" according to IEC 60947-4-1: After a short-circuit incident, the unit is defective and therefore unsuitable for further use (protection of persons and system guaranteed).

ToC  
2

Type of coordination "2" according to IEC 60947-4-1: After a short-circuit incident the unit is suitable for further use (protection of persons and system guaranteed).

The type of coordination refers to soft starters in combination with the stipulated protective device (motor starter protector/fuse), not to any additional components in the feeder.

The types of coordination are indicated in the corresponding tables by the symbols shown on orange backgrounds.

### Feeder tests and results

To keep the scope of feeder tests with SIRIUS 3RW soft starters within economically reasonable limits, tests were conducted with feeder components (motor starter protectors/circuit breakers, fuses) that cover the greatest number of use cases (different soft starter versions depending on, for example, line voltage, type of circuit, or necessary overdimensioning). For the combined tests that were conducted, the values for the short-circuit breaking capacity  $I_q$  in kA were determined and documented.

If the short-circuit breaking capacity is the same, of course, smaller motor starter protectors or fuses can also be used for the selected soft starter provided the dimensioning of the short-circuit components is suitable for the connected three-phase motor and the line protection for the cables used. For type of coordination "2" (with semiconductor protection), it is also necessary to compare the characteristics because the protection function would no longer be completely ensured if too small a fuse were selected. If the soft starter does not have a motor protection function, the motor protection must also be dimensioned appropriately.

### Line protection and motor protection

Line protection and motor protection are not ensured in all operating cases, depending on:

- how the motor feeder is constructed (e.g. with fuses or motor starter protectors),
- whether the SIRIUS 3RW soft starters are operated within the specification relevant for the tests (IEC 60947-4-2)
- or whether the documented constraints (see page 6/7) have been observed.

There are operating states of the thyristors (caused, for example, by high starting frequencies or heavy starting) that do not permit an overload to be disconnected by the SIRIUS 3RW soft starter. These cases are very rare but cannot be ruled out in all cases.

In accordance with IEC 60947-4-2, the SIRIUS 3RW soft starters are dimensioned and checked for operation with up to 8 times the rated operational current  $I_e$ . For currents larger than this, reliable disconnection of an overcurrent by the SIRIUS 3RW soft starter is not ensured. Such large overcurrents have to be disconnected by an upstream switching element (e.g. by a motor starter protector/circuit breaker or a fuse in conjunction with an optional line contactor).

Motor protection by the SIRIUS 3RW soft starter is ensured for currents up to 8 times the rated operational current  $I_e$  in any case. Line protection is covered by the line-side motor starter protector/circuit breaker or fuse. These motor feeder components must be dimensioned accordingly and the cable cross-sections must be chosen to match.

### Line protection

Line protection in motor feeders with soft starters is always covered by a fuse or a motor starter protector/circuit breaker both in case of an overload and in case of a short-circuit. The motor starter protector/circuit breaker must have an overload release. That is the case for motor starter protectors (e.g. SIRIUS 3RV20).

Circuit breakers without an overload release (e.g. SIRIUS 3RV23 motor starter protectors) must not be used because they do not provide overload protection. The feeder tests for these were therefore not performed. If the motor feeder with SIRIUS 3RW soft starters is configured without a fuse, motor starter protectors must be used that ensure tripping on an overload.

### Motor protection

If fuses are used to provide protection against overload and short-circuit of the cables, the motor is protected by the SIRIUS 3RW soft starter. If the constraints (simple starting conditions CLASS 10, listed maximum values for starting current, starting time and number of starts per hour) of page 6/7 are observed, the motor feeders can be configured according to IEC as described in the section about soft starters (an optional line contactor is not required). If these preconditions are met, the SIRIUS 3RW soft starters are able to trip on overloads to protect the motor in any case.

In other starting conditions and on heavy starting, the following must be considered:

- Tested fuseless switchgear assemblies comprising SIRIUS 3RW soft starters and motor starter protectors only comply with CLASS 10.  
To configure motor feeders, for example, for CLASS 20 or CLASS 30, fuses must be used together with SIRIUS 3RW soft starters.
- In applications with high starting frequencies or heavy starting as of CLASS 20, we recommend combining fuses with the use of a line contactor on the line side so that a motor overload is disconnected by the fault signaling contact of the soft starter in any case (that is, even in rare cases in which disconnection by the SIRIUS 3RW soft starter is no possible due to the operating state of the thyristors).

If circuit breakers with an overload release are used (e.g. SIRIUS 3RV20 motor starter protector), we recommend activating the motor protection function of the SIRIUS 3RW soft starter to protect the motor and setting the soft starter to the rated operational current  $I_e$  of the motor. We recommend setting the circuit breaker in such a way that it provides line protection but does not usually trip before the soft starter when a motor overload occurs.

## Benefits

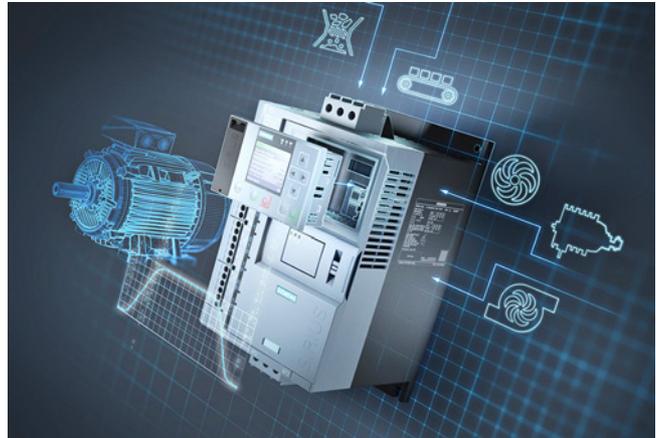

### Can be flexibly deployed in many applications

**Strong portfolio:**  
comprehensive, coordinated soft starter portfolio

- The right hardware for all requirements, soft starters for tasks ranging from simple to demanding starting in Basic, General and High Performance versions
- Extensive portfolio for individual expansion: Optional HMIs for installation in the device or mounting on the control cabinet door  
Communication via PROFINET/PROFIBUS and Modbus
- Designer enclosure with removable terminals, space-saving thanks to compact design and rugged thanks to coated printed circuit boards
- Can be used worldwide thanks to numerous certificates and approvals, IEC, UL, CSA, CCC

**Intelligent operation:**  
concentrated, application-specific functionality

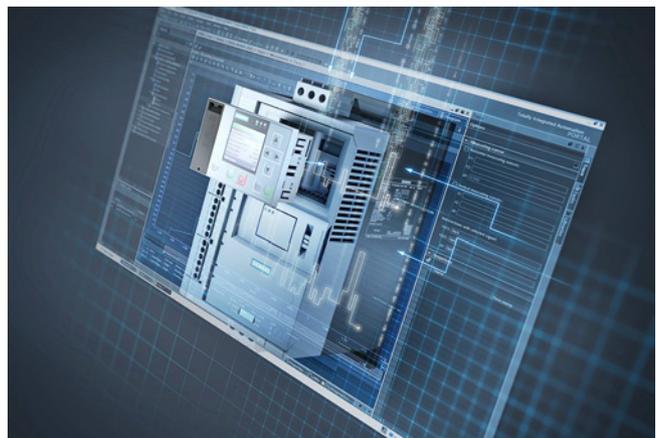

- Can be used in a wide variety of applications: Pumping, ventilating, compressing, moving and processing
- Integrated, self-learning automatic parameterization depending on motor starting conditions
- Application-specific functionality such as pump cleaning and pump stop
- Condition monitoring: Current and energy monitoring with warning and alarm limits, starting time monitoring

**Efficient switching:**  
hybrid switching technology on board

- Energy-efficient switching and mechanical protection of the drive train thanks to soft starters with hybrid switching technology
- Low-wear switching extends the service life of the devices
- Soft starting prevents current peaks, thereby increasing the network stability
- Protection against disturbances in the application. Mechanical protection for the drive train

**Ready for a digital future:**  
data available whenever and wherever needed

- Support from tools and data during engineering
- Simulation Tool for Soft Starters for support during product selection
- Very simple, standardized commissioning and configuration via Soft Starter ES in TIA Portal
- Integration in the automation system via communication interfaces
- Data availability and analysis: large volumes of data at any time and anywhere, even into MindSphere

# SIRIUS 3RW Soft Starters

## High Performance Soft Starters

### 3RW55 Soft Starters

General data **NEW**

#### Overview

##### More information

SIRIUS Soft Starter ES (TIA Portal), see page 14/5

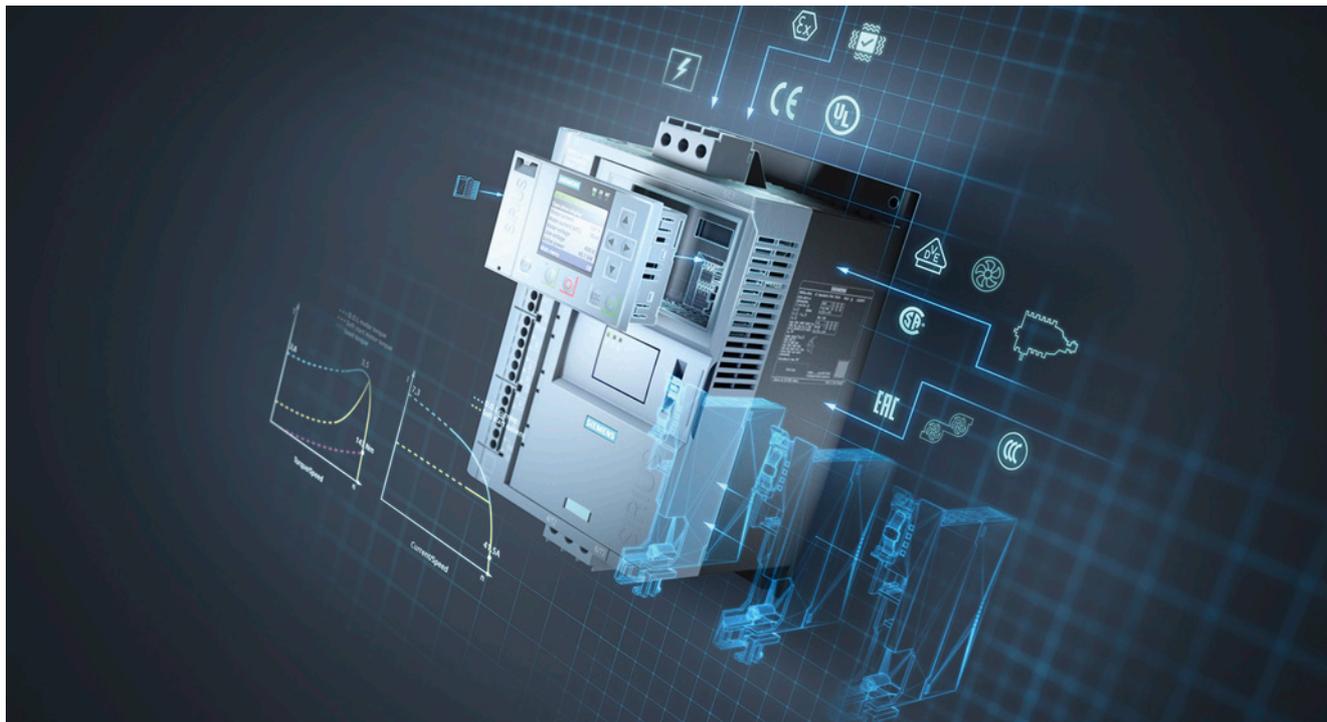

Equipped with the utmost functionality, the SIRIUS 3RW55 High Performance soft starters confidently handle even difficult starting and stopping operations. Thanks to innovative torque control, the device can be used for drives with an output of between 5.5 kW and 560 kW (at 400 V).

The functions have been specially designed to offer maximum user friendliness. By means of the detachable HMI (with color display, local interface and a slot for MicroSD memory card) and plug-in communication modules (PROFINET, PROFIBUS, Modbus), they ensure maximum flexibility. With their modern hybrid switching technology, the SIRIUS 3RW55 soft starters offer efficient switching for long-term, energy-saving use.

3RW55 High Performance soft starter with accessories (see page 6/25)

**Benefits**

6

**Product characteristics / function**

Automatic parameterization

Hybrid switching devices and three-phase motor control

Integration into TIA Portal – communication modules optional

HMI with color display, local interface, slot for micro SD card

Pump stop and torque control

**Performance features / benefits**

Extremely simple commissioning and reliability even under changing load conditions

Minimum power loss and optimum/symmetrical motor control

Efficient configuration and maximum flexibility in automation engineering

Maximum flexibility with regard to user interface and intuitive menu guidance

Reduced mechanical loading and optimum pump stop control

##### Note:

In inside-delta circuits, a gR class full-range fuse could not provide the semiconductor protection of the delta-connected soft starter with a short-circuit breaking capacity that is adequate for practical use. In this case, we recommend using aR class partial-range fuses for semiconductor protection for type of coordination "2" ([see page 6/19](#)).

#### Motor feeders according to IEC with 3NE8 / 3NE3 / 3NC3 fuses

aR class partial-range fuses for semiconductor protection

Type of coordination "2",  
short-circuit breaking capacity  $I_{q} = 65 \text{ kA}$

#### Note:

For general recommendations for constructing motor feeders with soft starters, see page 6/9.

#### Note:

For CLASS 10 applications, as an alternative to the gG class full-range fuses for cable and line protection 3NA3 (F1), 3RV2/3VA motor starter protectors/circuit breakers can also be used, possibly with reduced short-circuit breaking capacity (see page 6/16). In these cases, optional line contactors can be dispensed with.

In inside-delta circuits, motor feeders with soft starters can only be operated in systems with up to 600 V.

# SIRIUS 3RW Soft Starters

## High Performance Soft Starters

### 3RW55 Soft Starters

#### General data **NEW**

#### Reversing operation with reversing contactors

Note:

For general recommendations for constructing motor feeders with soft starters, [see page 6/9](#).

The SIRIUS 3RW44 High Performance soft starters are suitable for the torque-controlled soft starting and stopping as well as braking of three-phase asynchronous motors.

In addition to soft starting and stopping, the SIRIUS 3RW44 soft starters provide numerous functions for higher-level requirements. Soft starters are available in a performance range up to 710 kW (at 400 V) in the inline circuit and up to 1 200 kW (at 400 V) in the inside-delta circuit.

Combinations of various starting, operating and stopping possibilities ensure optimum adaptation to the application-specific requirements.

## Benefits

3RW442.

3RW443.

3RW444.

3RW445.

3RW446.

### Product characteristics / function

Soft starting with breakaway pulse, torque control or adjustable current limiting

Keypad with a menu-prompted, multi-line graphic display with background lighting

Various setting options for the starting parameters such as starting torque, starting voltage, starting and stopping time, and much more in three separate parameter sets

Integral bypass contact system

Communication interface to the PC

Connection to PROFIBUS and PROFINET with optional PROFIBUS DP or PROFINET module

### Performance features / benefits

Optimum adaptation to the requirements of the application

Simple and fast commissioning and maintenance

Efficient configuration and maximum flexibility in automation engineering

Reduction of power loss during operation

More accurate setting of the parameters as well as control and monitoring

Fast integration into higher-level controls

#### Motor feeders with soft starters

The type of coordination according to which the motor feeder with soft starter is mounted depends on the application-specific requirements. Normally, fuseless mounting (combination of motor starter protector and soft starter) is sufficient.

If type of coordination "2" is to be fulfilled, then semiconductor fuses must be fitted in the motor feeder.

ToC 1

Type of coordination "1" according to IEC 60947-4-1: After a short-circuit incident, the unit is defective and therefore unsuitable for further use (protection of persons and system guaranteed).

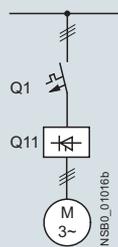

ToC 2

Type of coordination "2" according to IEC 60947-4-1: After a short-circuit incident the unit is suitable for further use (protection of persons and system guaranteed).

The type of coordination refers to soft starters in combination with the stipulated protective device (motor starter protector/fuse), not to any additional components in the feeder.

The types of coordination are indicated in the corresponding tables by the symbols shown on orange backgrounds.

1) If the ramp-down function "Combined braking" is selected, no braking contactor is required.  
If the ramp-down function "DC braking" is selected, a braking contactor must be used in addition (type, see table).  
For applications with large centrifugal masses ( $J_{Load} > J_{Motor}$ ) the function "DC braking" is recommended.

2) Additional auxiliary relay K4:  
LZS:RT4A4T30  
(3RW44 soft starter with rated control supply voltage 230 V AC),  
LZS:RT4A4S15  
(3RW44 soft starter with rated control supply voltage 115 V AC).

3) The type of coordination "1" refers to soft starters in combination with the stipulated protective device (motor starter protector/fuse), not to any additional components in the feeder.

<sup>1)</sup> The type of coordination "2" refers to soft starters in combination with the stipulated protective device (motor starter protector/fuse), not to any additional components in the feeder.

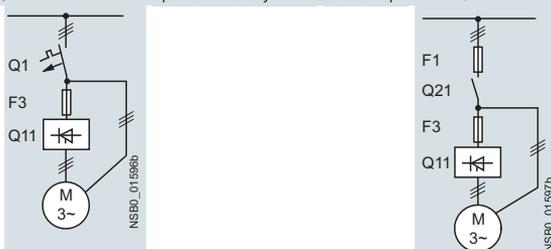

<sup>2)</sup> If the ramp-down function "Combined braking" is selected, no braking contactor is required. If the ramp-down function "DC braking" is selected, a braking contactor must be used in addition (type, see table).

For applications with large centrifugal masses ( $J_{Load} > J_{Motor}$ ) the function "DC braking" is recommended.

<sup>3)</sup> Additional auxiliary relay K4:  
LZS:RT4A4T30  
(3RW44 soft starter with rated control supply voltage 230 V AC),  
LZS:RT4A4S15  
(3RW44 soft starter with rated control supply voltage 115 V AC).

#### Inside-delta circuit fused version with 3NE or 3NC SITOR fuses

(semiconductor protection by fuse, line and overload protection by motor starter protector/circuit breaker)

For matching fuse bases, see Catalog LV 10:

- "Fuse systems" → "SITOR Semiconductor Fuses" or [www.siemens.com/sitor](http://www.siemens.com/sitor)
- "Switch disconnectors"

SIRIUS Soft Starter ES (TIA Portal) for diagnostics, see page 14/5

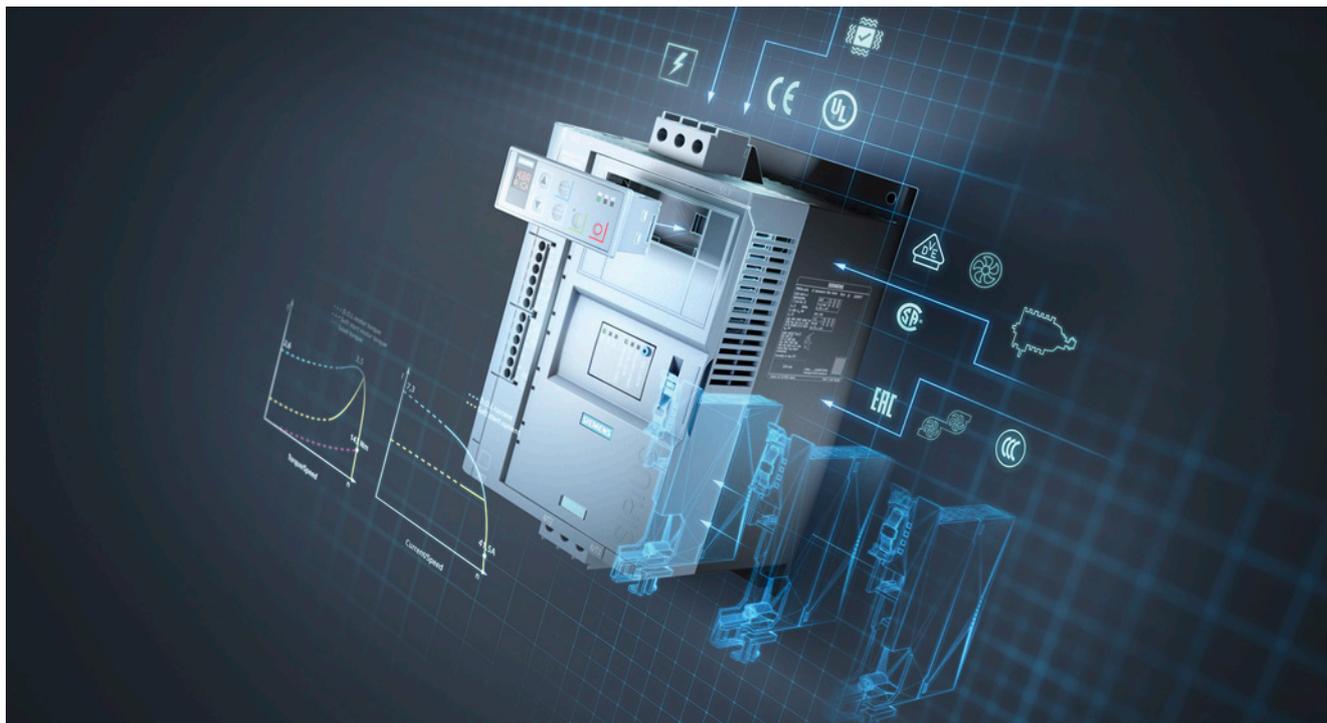

SIRIUS 3RW52 General Performance soft starters are the ideal solution for standard applications. With ideal 3-phase motor control, they cover the performance range from 5.5 to 560 kW (at 400 V).

With optional HMI modules, plug-in communication modules (PROFINET, PROFIBUS, Modbus) and either an analog output or thermistor motor protection, they ensure maximum flexibility. With their modern hybrid switching technology, the SIRIUS 3RW52 soft starters offer efficient switching for long-term, energy-saving use.

General Performance soft starters with accessories (see page 6/54), for expansion with HMI module or communication modules.

#### Benefits

#### Product characteristics / function

Hybrid switching devices and three-phase motor control

TIA-Integration – communication modules and HMI modules optional

Soft Torque

Parameterization using potentiometers

Wide range for control supply and main voltage

#### Performance features / benefits

Minimum power loss and optimum/symmetrical motor control

Efficient configuration and maximum flexibility in automation engineering

Reduced mechanical loading and optimum pump stop

Simple and fast commissioning

Low variance, high system availability even with weak supply networks

# SIRIUS 3RW Soft Starters

## General Performance Soft Starters

### 3RW52 Soft Starters

#### General data **NEW**

#### Motor feeders according to IEC with 3NE1 SITOR fuses

gR class full-range fuses for semiconductor protection, cable and line protection

Type of coordination "2",  
short-circuit breaking capacity  $I_{q} = 65 \text{ kA}$

#### Note:

For general recommendations for constructing motor feeders with soft starters, [see page 6/9](#).

<b>3RW5246</b>	3NE1334-2		3RT1075	3RT1075
<b>3RW5247</b>	3NE1436-2		3RT1076	3RT1276
<b>3RW5248</b>	3NE1437-2		3TF68	3TF68

#### Note:

In inside-delta circuits, a gR class full-range fuse could not provide the semiconductor protection of the delta-connected soft starter with a short-circuit breaking capacity that is adequate for practical use. In this case, we recommend using aR class partial-range fuses for semiconductor protection for type of coordination "2" ([see page 6/49](#)).

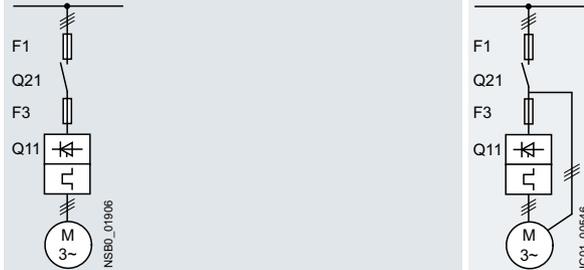

**Motor feeders according to IEC with 3NE8 / 3NE4 / 3NE3 fuses**

aR class partial-range fuses for semiconductor protection

Type of coordination "2",  
 short-circuit breaking capacity  $I_q = 65 \text{ kA}$

Note:

For general recommendations for constructing motor feeders with soft starters, see page 6/9.

<b>3RW5248</b>	2 x 3NA3365-6	3NE3340-8	3TF68	3TF68	2 x 3NA3365-6	3NE3340-8	--	--	3TF68	3TF68

Note:

For CLASS 10 applications, as an alternative to the gG class full-range fuses for cable and line protection 3NA3 (F1), 3RV2/3VA motor starter protectors/circuit breakers can also be used, possibly with reduced short-circuit breaking capacity (see page 6/46). In these cases, optional line contactors can be dispensed with.

# SIRIUS 3RW Soft Starters

## Basic Performance Soft Starters

### 3RW40 Soft Starters

#### General data

#### Overview

##### More information

Homepage, see [www.siemens.com/soft-starter](http://www.siemens.com/soft-starter)  
 Industry Mall, see [www.siemens.com/product?3RW](http://www.siemens.com/product?3RW)

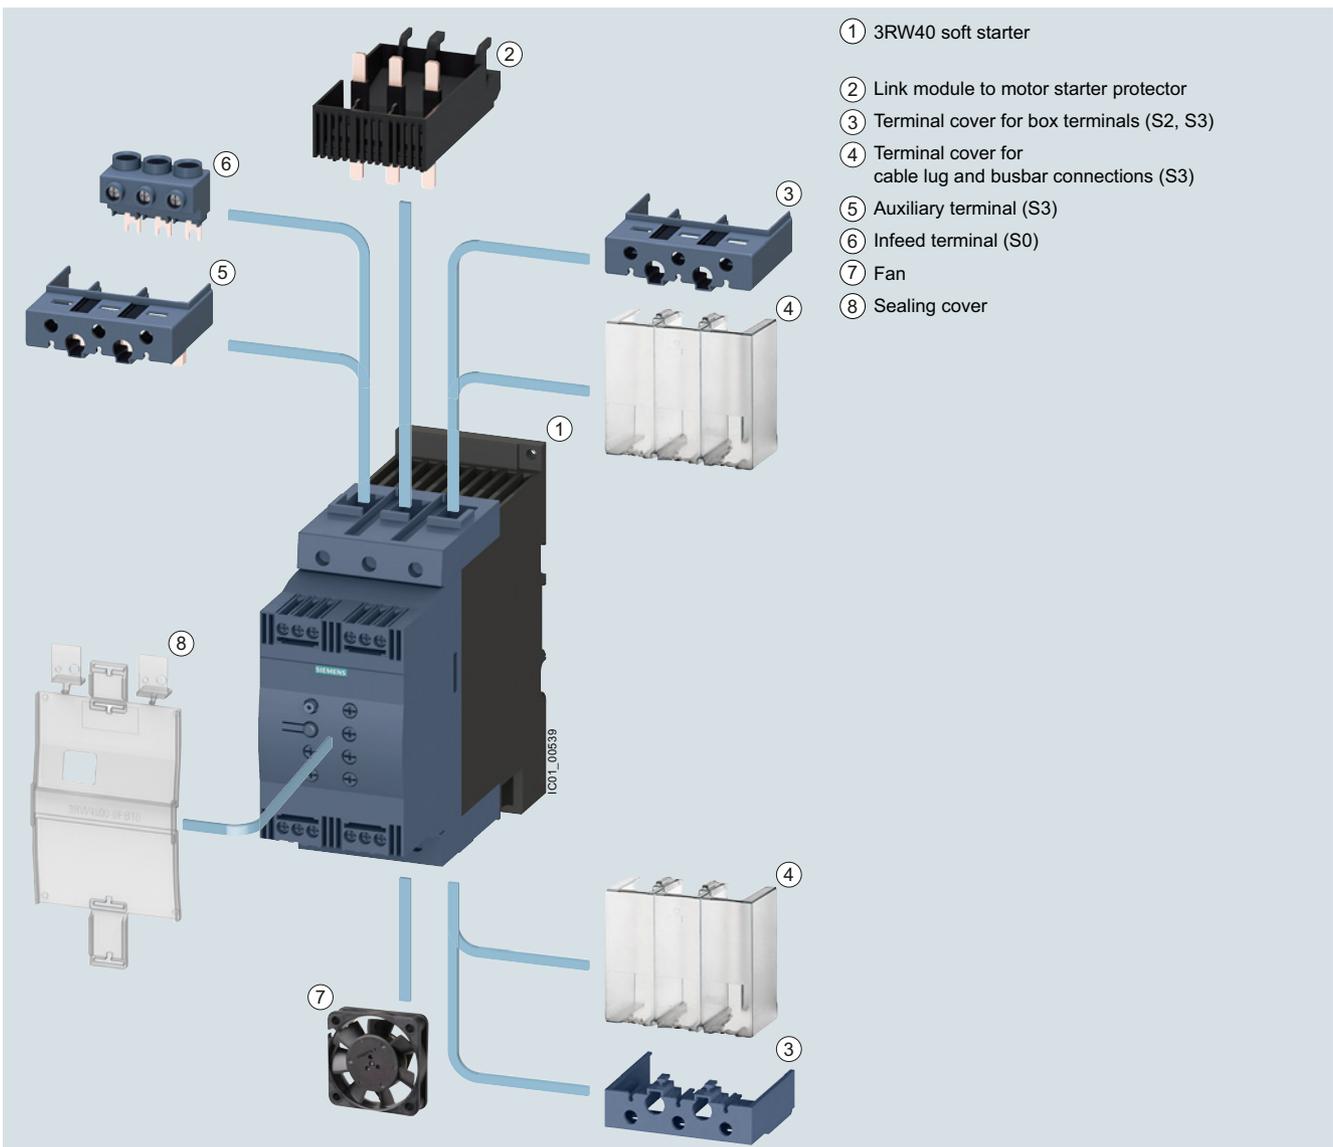

TIA Selection Tool Cloud (TST Cloud), see <https://mall.industry.siemens.com/spice/tstweb/?KMAT=3rw40>  
 Simulation Tool for Soft Starters (STS), see page 6/7 or <https://support.industry.siemens.com/cs/ww/en/view/101494917>

The SIRIUS 3RW40 Basic Performance soft starters are suitable for soft starting and stopping of three-phase asynchronous motors.

Due to two-phase control, the current is kept at minimum values in all three phases throughout the entire start-up time and disturbing direct current components are eliminated in addition. This not only enables the two-phase starting of motors up to 250 kW (at 400 V) but also avoids the current and torque peaks which occur e.g. with wye-delta starters.

The SIRIUS 3RW40 soft starters are suitable for the starting of explosion-proof motors with "increased safety" type of protection EEx e according to ATEX Directive 94/9/EC.

3RW40 Basic Performance soft starter with accessories (see page 6/68)

#### Benefits

3RW402.

3RW403.

3RW404.

3RW405.

3RW407.

Product characteristics / function	Performance features / benefits
Small and compact design	Space-saving, clearly arranged control panel layout
Motor overload and intrinsic device protection without additional wiring	Adjustable trip classes, integrated diagnostics functions
Integrated bypass contact system	Reduction of power loss during operation
Certified according to ATEX Directive 94/9/EC	Suitable for the starting of explosion-proof motors with "increased safety" type of protection EEx e.
Optional thermistor motor protection up to a rating of 55 kW	Full motor protection

The SIRIUS 3RW30 Basic Performance soft starters are suitable for soft starting of three-phase asynchronous motors.

Due to two-phase control, the current is kept at minimum values in all three phases throughout the entire start-up time and disturbing direct current components are eliminated in addition. This not only enables the two-phase starting of motors up to 55 kW (at 400 V) but also avoids the current and torque peaks which occur e.g. with wye-delta starters.

- ① 3RW30 soft starter
- ② Link module to motor starter protector
- ③ Terminal cover for box terminals (S2, S3)
- ④ Terminal cover for cable lugs and busbar connections (S3)
- ⑤ Auxiliary terminal (S3)
- ⑥ Infeed terminal (S00, S0)

3RW30 Basic Performance soft starter with accessories (see page 6/81)

#### General data

#### Benefits

3RW301.

3RW302.

3RW303.

3RW304.

3RW3003-2CB54

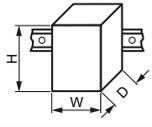

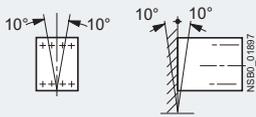

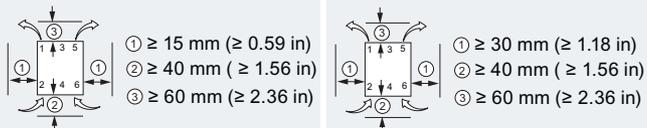

Product characteristics / function	Performance features / benefits
Small and compact design	Space-saving, clearly arranged control panel layout
Parameterization using potentiometers	Simple and fast commissioning
Integrated bypass contact system	Reduction of power loss during operation
"Polarity Balancing" control method	Avoidance of direct current components in two-phase controlled soft starters.

<sup>1)</sup> The rated motor current (specified on the motor's name plate) should at least amount to the specified percentage of the SIRIUS soft starter unit's rated operational current  $I_e$ .

<sup>2)</sup> If this value is exceeded, problems with line capacities may arise, which can result in false firing.

**SIRIUS 3RF solid-state switching devices**

Three-phase solid-state contactor and single-phase solid-state relay

The SIRIUS 3RF2 solid-state switching devices reliably switch a wide range of different loads with alternating voltages in 50 and 60 Hz systems.

SIRIUS 3RF2 solid-state switching devices for resistive/inductive loads:

- Solid-state relays
- Solid-state contactors
- Function modules

SIRIUS 3RF2 – for almost unending activity

Conventional electromechanical switching devices are often overtaxed by the rise in the number of switching operations. A high switching frequency results in frequent failure and short replacement cycles. However, this does not have to be the case, because with the latest generation of our SIRIUS 3RF2 solid-state switching devices we provide you with solid-state relays and contactors with a particularly long endurance – for almost unending activity even under the toughest conditions and under high mechanical load, but also in noise-sensitive areas.

Proven time and again in service

SIRIUS 3RF2 solid-state switching devices have firmly established themselves in industrial applications. They are used above all in applications where loads are switched frequently – mainly with resistive load controllers, with the control of electrical heat or the control of valves and motors in conveyor systems. In addition to its use in areas with high switching frequencies, their silent switching means that SIRIUS is also ideally suited for use in noise-sensitive areas, such as offices or hospitals.

The most reliable solution for any application

Compared to mechanical switching devices, our SIRIUS 3RF2 solid-state switching devices stand out due to their considerably longer service life. Thanks to the high product quality, their switching is extremely precise, reliable and, above all, insusceptible to faults. With its variable connection methods and a wide spread of control voltages, the SIRIUS 3RF2 family is universally applicable. Depending on the individual requirements of the application, our modular switching devices can also be quite easily expanded by the addition of standardized function modules.

Always on the sunny side with SIRIUS

Because SIRIUS 3RF2 offers even more:

- The space-saving and compact side-by-side mounting ensures reliable operation up to an ambient temperature of +60 °C.
- Thanks to fast configuration and the ease of mounting and commissioning, you save not only time but also expenses.

Also for switching motors

(see page 6/138)

In order to achieve higher productivity, the switching frequency is continuously increased. It is no problem for our SIRIUS solid-state contactors for switching motors. With induction motors up to 7.5 kW, they can reliably withstand even the highest switching frequencies. Even a continuous change in the direction of rotation is possible with the solid-state reversing contactors. Both versions can be perfectly combined with components from the SIRIUS modular system. Connecting with SIRIUS motor starter protectors or SIRIUS overload relays can be implemented without any further steps.

SIRIUS 3RF3 solid-state switching devices for switching motors:

- Solid-state contactors
- Solid-state reversing contactors

**Connection methods**

The solid-state switching devices are available with screw terminals (box terminals), spring-type terminals or ring terminal lugs.

-  Screw terminals
-  Spring-type terminals
-  Ring terminal lug connection

The terminals are indicated in the corresponding tables by the symbols shown on orange backgrounds.

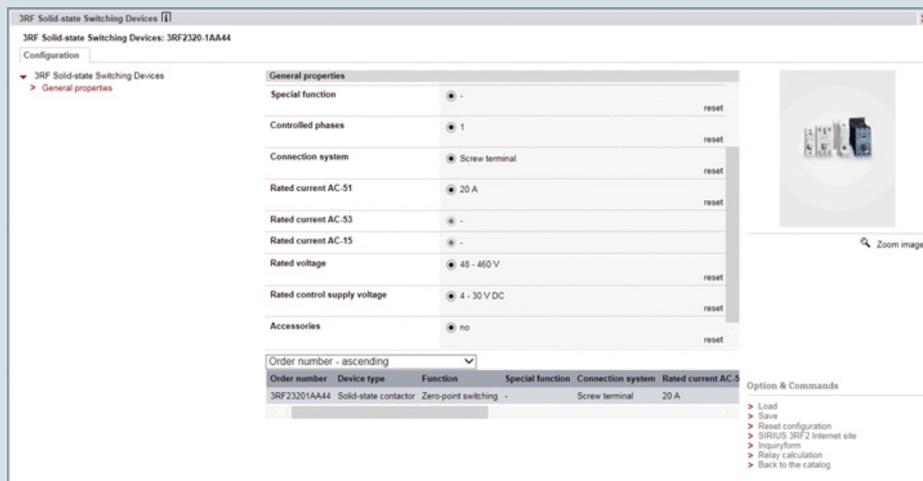

## Solid-State Switching Devices for Resistive/Inductive Loads

### General data

#### Online Configurator

- Simple selection of individual solid-state switching devices by means of technical characteristics (e.g. zero-point switching, spring-type terminal and rated current)
- Once configuration is complete, you receive the article numbers corresponding to the products.

see  
[www.siemens.com/sirius/configurators](http://www.siemens.com/sirius/configurators)

1) The converter can also be used with three-phase devices.

## Solid-State Switching Devices for Resistive/Inductive Loads

### General data

#### Benefits

##### Features

- Considerable space savings thanks to a width of only 22.5 mm
- Variety of connection methods: Screw terminal, spring-type terminal or ring terminal lug, there is no problem – they are all finger-safe
- Flexible for all applications with function modules for retrofitting
- Possibility of fuseless short-circuit proof design

##### Benefits

- Saves time and costs with fast mounting and commissioning, short start-up times and easy wiring
- Extremely long life, low maintenance, rugged and reliable
- Space-saving and safe thanks to side-by-side mounting up to an ambient temperature of +60 °C
- Modular design: Standardized function modules and heat sinks can be used in conjunction with solid-state relays to satisfy individual requirements
- Safety due to life-long, vibration-resistant and shock-resistant spring-type terminal connection method even under tough conditions

#### Application

##### Application areas

###### Example: Plastics processing industry

Thanks to their high switching endurance SIRIUS 3RF2 solid-state switching devices are ideal for controlling electrical heat. This is because the more precise the temperature regulation process has to be, the higher the switching frequency. The accurate regulation of electrical heat is used for example in many processes in the plastics processing industry:

- Band heaters heat the extrudate to the correct temperature in plastic extruders
- Heat emitters heat plastic blanks to the correct temperature
- Heat drums dry plastic granules
- Heating channels keep molds at the correct temperature in order to manufacture different plastic parts without defects

The powerful SIRIUS 3RF2 solid-state relays and contactors can be used for the simultaneous control of several heating loads. By using a load monitoring module the individual partial loads can easily be monitored, and in the event of a failure a signal is generated to be sent to the controller.

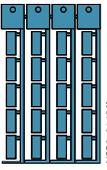

###### Use in fuseless load feeders

Compared with the fused configuration of load feeders, short-circuit and line protection using miniature circuit breakers is easy to achieve with SIRIUS 3RF2 solid-state relays and contactors.

A special version of the solid-state contactors can be protected against damage in the case of a short circuit with a miniature circuit breaker with type B tripping characteristic. This allows the low-cost and simple design of fuseless load feeders with full protection of the switchgear.

### Selection and ordering data

#### Inscription labels for 3RF2 series

Designation	Labeling area (W x H)	Color	SD	Article No.	Price per PU	PU (UNIT, SET, M)	PS*	PG

<sup>1)</sup> PC labeling systems for individual inscription of unit labeling plates are available from: murrplastik Systemtechnik GmbH, see page 16/16.

**More information****Notes on integration in the load feeders**

The SIRIUS solid-state switching devices are very easy to integrate into the load feeders thanks to their industrial connection method and design.

Particular attention must however be paid to the circumstances of the installation and ambient conditions, as the performance of the solid-state switching devices is largely dependent on these. Depending on the version, certain restrictions must be observed. Detailed information in relation to solid-state contactors, e.g. on minimum spacing, and in relation to solid-state relays on the choice of heat sink can be found in the technical specifications and in the product data sheets, [see https://support.industry.siemens.com/cs/ww/en/ps/16222](https://support.industry.siemens.com/cs/ww/en/ps/16222).

**Short-circuit and overload protection**

Despite the rugged power semiconductors that are used, solid-state switching devices respond more sensitively to short circuits in the load feeder. Consequently, special precautions have to be taken against destruction, depending on the type of design.

Siemens generally recommends using SITOR semiconductor protection fuses. These fuses also provide protection against destruction in the event of a short circuit even when the solid-state contactors and solid-state relays are fully utilized.

Alternatively, if there is lower loading, protection can also be provided by standard fuses or miniature circuit breakers. This protection is achieved by overdimensioning the solid-state switching devices accordingly. The technical specifications and the product data sheets contain details both about the solid-state fuse protection itself and about use of the devices with conventional protection equipment.

**Electromagnetic compatibility (EMC)**

The solid-state switching devices are suitable for interference-free operation in industrial networks without further measures. If they are used in public networks, it may be necessary for conducted interference to be reduced by means of filters.

This does not include the solid-state contactors for resistive loads of the special type 3RF23...-CA.. "Low Noise". These comply with the class B limit values up to a rated current of 16 A. If other versions are used, and at currents of over 16 A, standard filters can be used in order to comply with the limit values. The decisive factors when it comes to selecting the filters are essentially the current loading and the other parameters (operational voltage, design type, etc.) in the load feeder.

Suitable filters can be ordered from EPCOS AG, [see page 16/16](#).

**Product information and technical specifications**

For product data sheets with detailed technical specifications, dimensional drawings and characteristic curves, [see https://support.industry.siemens.com/cs/ww/en/ps/16222](https://support.industry.siemens.com/cs/ww/en/ps/16222).

For additional information, please enter the article number of the required device under the tab "Product List".

## Solid-State Switching Devices for Resistive/Inductive Loads

### Solid-State Relays

#### General data

#### Overview

##### **Solid-state relays (without heat sink)**

SIRIUS solid-state relays are suitable for surface mounting on existing cooling surfaces. Mounting is quick and easy, involving just two screws. The special technology of the power semiconductor ensures there is excellent thermal contact with the heat sink. Depending on the nature of the heat sink, the capacity reaches up to 88 A on resistive loads.

The solid-state relays are available in three different versions:

- 3RF21 single-phase solid-state relay with a width of 22.5 mm
- 3RF20 single-phase solid-state relay with a width of 45 mm
- 3RF22 three-phase solid-state relay with a width of 45 mm

The 3RF21 and 3RF22 solid-state relays can be expanded with various function modules to adapt them to individual applications.

##### **Version for resistive loads "zero-point switching"**

This standard version is often used for switching space heaters on and off.

##### **Version for inductive loads "instantaneous switching"**

In this version the solid-state relay is specifically matched to inductive loads. Whether it is a matter of frequent actuation of the valves in a filling plant or starting and stopping small operating mechanisms in packet distribution systems, operation is carried out safely and noiselessly.

##### **Special "Low Noise" version**

Thanks to a special control circuit, this special version can be used in public networks up to 16 A without any additional measures such as interference suppressor filters. As a result, in terms of emitted interference, it conforms to limit value curve class B according to IEC 60947-4-3.

##### **Single-phase solid-state relays with a width of 22.5 mm**

With its compact design and a width of just 22.5 mm, which stays the same even at currents of up to 88 A, the 3RF21 solid-state relay offers an ultra small footprint. The logical connection method, with the power infeed from above and load connection from below, ensures tidy installation in the control cabinet.

##### **Single-phase solid-state relays with a width of 45 mm**

The solid-state relays with a width of 45 mm provide for connection of the power supply lead and the load from above. This makes it easy to replace existing solid-state relays in existing arrangements. The connection of the control cable is as space-saving as the 22.5 mm design, as it is simply plugged on.

##### **Three-phase solid-state relays with a width of 45 mm**

With its compact design and a width of just 45 mm, which stays the same even at currents of up to 55 A, the 3RF22 solid-state relay offers an ultra small footprint. The logical connection method, with the power infeed from above and load connection from below, ensures tidy installation in the control cabinet.

The three-phase solid-state relays are available with

- Two-phase control (suitable in particular for circuits without connection to the neutral conductor) and
- Three-phase control (suitable for star circuits with connection to the neutral conductor or for applications in which the system requires all phases to be switched)

##### **Selection notes**

When selecting solid-state relays, in addition to information about the network, the load and the ambient conditions it is also necessary to know details of the planned design. The solid-state relays can only conform to their specific technical specifications if they are mounted with appropriate care on an adequately dimensioned heat sink.

Mounting solid-state relays directly on a mounting plate made of sheet steel is inadequate in terms of heat dissipation.

The following procedure is recommended:

- Determine the rated current of the load and the mains voltage
- Select the relay design and choose a solid-state relay with higher rated current than the load
- Determine the thermal resistance of the proposed heat sink
- Check the correct relay size with the aid of the diagrams
- In systems that have high voltage peaks or at voltages of 575 V and higher, use of versions with a blocking voltage of 1600 V is recommended

3RF2120-2AA02

<sup>1)</sup> The type current provides information about the performance capacity of the solid-state relay. The actual permitted rated operational current  $I_e$  can be smaller depending on the connection method and cooling conditions.

<sup>2)</sup> Please note that the version with spring-type terminals can only be used for a rated current of up to approx. 20 A and a conductor cross-section of 2.5 mm<sup>2</sup>. Higher currents can be achieved by connecting two conductors per terminal.

Other rated control supply voltages on request.

## Solid-State Relays

### SIRIUS 3RF20 solid-state relays, single-phase, 45 mm

#### Overview

#### Single-phase solid-state relays (without heat sink) with a width of 45 mm

The solid-state relays with a width of 45 mm provide for connection of the power supply lead and the load from above. This makes it easy to replace existing solid-state relays in existing arrangements.

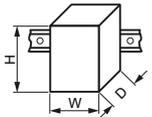

The connection of the control cable is as space-saving as the 22.5 mm design, as it is simply plugged on.

#### Technical specifications

System Manual "SIRIUS Modular System – System Overview", see <https://support.industry.siemens.com/cs/ww/en/view/60311318>

FAQs, see <https://support.industry.siemens.com/cs/ww/en/ps/16225/faq>

Type		3RF20..-1....	3RF20..-4....
Dimensions (W x H x D)	 mm	45 x 58 x 48	45 x 58 x 48

##### General data

##### Ambient temperature

- |   |    |             |
|---|----|-------------|
| • During operation, derating from 40 °C | °C | -25 ... +60 |
| • During storage                        | °C | -55 ... +80 |

##### Installation altitude

	m	0 ... 1 000; derating from 1 000
--	---	----------------------------------

<b>Shock resistance</b> acc. to IEC 60068-2-27	g/ms	15 /11
--	------	--------

<b>Vibration resistance</b> acc. to IEC 60068-2-6	g	2
---	---	---

##### Degree of protection

		IP20
--	--	------

##### Electromagnetic compatibility (EMC)

- |   |     |   |   |
|---|-----|---|---|
| • Emitted interference  |     |   |   |
| - Conducted interference voltage acc. to IEC 60947-4-3                                |     |   | Class A for industrial applications                           |
| - Emitted, high-frequency interference voltage acc. to IEC 60947-4-3                  |     |   | Class B for residential, business and commercial applications |
| • Interference immunity   |     |   |   |
| - Electrostatic discharge acc. to IEC 61000-4-2 (corresponds to degree of severity 3) | kV  |   | Contact discharge 4; air discharge 8; behavior criterion 2    |
| - Induced RF fields according to IEC 61000-4-6  | MHz | 0.15 ... 80; 140 dBµV; behavior criterion 1                         |   |
| - Burst acc. to IEC 61000-4-4   | kV  | 2/5.0 kHz; behavior criterion 2                                     |   |
| - Surge acc. to IEC 61000-4-5   | kV  | Conductor - ground 2; conductor - conductor 1; behavior criterion 2 |   |

##### Mounting

- |  |    |        |
|--|----|--------|
| • Screws (not included in the scope of supply) |    | 2 x M4 |
| • Tightening torque                            | Nm | 1.5    |

##### Connection type

**Screw terminals**

**Spring-type terminals**

##### Connection, main contacts

- |                                   |                 | Screw terminals  | Spring-type terminals |
|-----------------------------------|-----------------|--|-----------------------|
| • Conductor cross-sections        |                 |  |                       |
| - Solid                           | mm <sup>2</sup> | 2 x (1.5 ... 2.5) <sup>1)</sup> , 2 x (2.5 ... 6) <sup>1)</sup>        | --                    |
| - Finely stranded with end sleeve | mm <sup>2</sup> | 2 x (1 ... 2.5) <sup>1)</sup> , 2 x (2.5 ... 6) <sup>1)</sup> , 1 x 10 | --                    |
| - Solid or stranded, AWG cables   | AWG             | 2 x (14 ... 10)  | --                    |
| • Terminal screw                  |                 | M4   | --                    |
| • Tightening torque               | Nm              | 2 ... 2.5  | --                    |
|                                   | lb.in           | 7 ... 10.3   | --                    |

##### Connection, auxiliary/control contacts

- |                            |                 |                                      |             |
|----------------------------|-----------------|--------------------------------------|-------------|
| • Conductor cross-sections | mm <sup>2</sup> | 1 x (0.5 ... 2.5), 2 x (0.5 ... 1.0) | 0.5 ... 2.5 |
|                            | AWG             | 20 ... 12                            | 20 ... 12   |
| • Stripped length          | mm              | 7                                    | 10          |
| • Terminal screw           |                 | M3                                   | --          |
| • Tightening torque        | Nm              | 0.5 ... 0.6                          | --          |
|                            | lb.in           | 4.5 ... 5.3                          | --          |

<sup>1)</sup> If two different conductor cross-sections are connected to one clamping point, both cross-sections must lie in one of the ranges specified.

## Solid-State Switching Devices for Resistive/Inductive Loads

### Solid-State Relays

#### SIRIUS 3RF20 solid-state relays, single-phase, 45 mm

Type	$I_{\max}^{1)}$ at $R_{\text{thha}}/T_u = 40\text{ °C}$		$I_e$ acc. to IEC 60947-4-3 at $R_{\text{thha}}/T_u = 40\text{ °C}$		$I_e$ acc. to UL/CSA at $R_{\text{thha}}/T_u = 50\text{ °C}$		Power loss at $I_{\max}$	Minimum load current	Off-state current
	A	K/W	A	K/W	A	K/W			
<b>Main circuit</b>

## Solid-State Relays

### SIRIUS 3RF22 solid-state relays, three-phase, 45 mm

#### Overview

#### Three-phase solid-state relays (without heat sink) with a width of 45 mm

With its compact design and a width of just 45 mm, which stays the same even at currents of up to 55 A, the 3RF22 solid-state relay offers an ultra small footprint. The logical connection method, with the power infeed from above and load connection from below, ensures tidy installation in the control cabinet.

Important features:

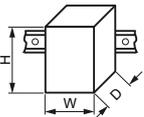

- LED display
- Variety of connection methods
- Plug-in control connection
- Degree of protection IP20 (with ring terminal lug connection IP00)
- Zero-point switching, two- or three-phase controlled

# Solid-State Switching Devices for Resistive/Inductive Loads

## Solid-State Contactors

General data

### Overview

#### Solid-state contactors (with integrated heat sink)

The complete units consist of a solid-state relay plus optimized heat sink, and are therefore ready to use. They offer defined rated currents to make selection as easy as possible. Depending on the version, current strengths of up to 70 A are achieved. Like all of our solid-state switching devices, one of their particular advantages is their compact and space-saving design.

With their insulated mounting foot they can easily be snapped onto a standard mounting rail, or they can be mounted on support plates with fixing screws. The heat sink can be grounded through a screw terminal.

The solid-state contactors are available in 2 different versions:

- 3RF23 single-phase solid-state contactors
- 3RF24 three-phase solid-state contactors

#### Single-phase versions

The 3RF23 solid-state contactors can be expanded with various function modules to adapt them to individual applications.

##### Version for resistive loads "zero-point switching"

This standard version is often used for switching space heaters on and off.

##### Version for inductive loads "instantaneous switching"

In this version the solid-state contactor is specifically matched to inductive loads. Whether it is a matter of frequent actuation of the valves in a filling plant or starting and stopping small operating mechanisms in packet distribution systems, operation is carried out safely and noiselessly.

##### Special "low noise" version

Thanks to a special control circuit, this special version can be used in public networks up to 16 A without any additional measures such as interference suppressor filters. As a result, in terms of emitted interference, it conforms to limit value curve class B according to IEC 60947-4-3.

##### Special "short-circuit proof" version

Skillful matching of the power semiconductor with the performance capacity of the solid-state contactor means that "short-circuit strength" can be achieved with a standard miniature circuit breaker. In combination with a B-type MCB or a conventional line protection fuse, the result is a short-circuit proof feeder.

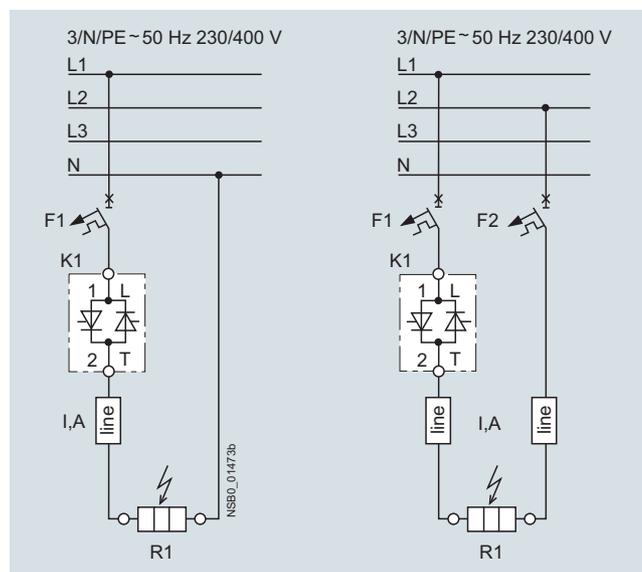

In order to achieve problem-free short-circuit protection by means of miniature circuit breakers, however, certain constraints must be observed. As the magnitude and duration of the short-circuit current are determined not only by the short-circuit breaking response of the miniature circuit breaker but also the properties of the wiring system, such as the internal resistance of the input to the network and damping by controls and cables, particular attention must also be paid to these parameters. The necessary cable lengths are therefore shown for the main factor, the line resistance, in the table below.

In systems that have high voltage peaks or at voltages of 575 V and higher, use of versions with a blocking voltage of 1 600 V is recommended

The following miniature circuit breakers with a B characteristic and 10 kA or 6 kA breaking capacity protect the 3RF23...-DA.. solid-state contactors in the event of short-circuits on the load and the specified conductor cross-sections and lengths:

Rated current of the miniature circuit breaker	Example of type <sup>1)</sup>	Max. conductor cross-section	Minimum cable length from contactor to load
6 A	5SY4106-6	1 mm <sup>2</sup>	5 m
10 A	5SY4110-6	1.5 mm <sup>2</sup>	8 m
16 A	5SY4116-6	1.5 mm <sup>2</sup>	12 m
		2.5 mm <sup>2</sup>	20 m
20 A	5SY4120-6	2.5 mm <sup>2</sup>	20 m
25 A	5SY4125-6	2.5 mm <sup>2</sup>	26 m

<sup>1)</sup> The miniature circuit breakers can be used up to a maximum rated voltage of 480 V!

Solid-state contactor protection

The setup and installation above can also be used for the solid-state relays with an  $I^2t$  value of at least 6 600 A<sup>2</sup>s.

#### Three-phase versions

The three-phase solid-state contactors for resistive loads up to 50 A are available with

- Two-phase control (suitable in particular for circuits without connection to the neutral conductor) and
- Three-phase control (suitable for star circuits with connection to the neutral conductor or for applications in which the system requires all phases to be switched)

The converter function module can be snapped onto both versions for the simple power control of AC loads by means of analog signals.

- Check the correct contactor size with the aid of the rated current diagram, taking account of the installation conditions

## Solid-State Contactors

### SIRIUS 3RF23 solid-state contactors, single-phase

#### Overview

Single-phase solid-state contactors with heat sink

Their compact design with optimized heat sink enables small complete units with currents up to 70 A. They also offer all the

special features of the solid-state relay in terms of time and space savings.

#### Technical specifications

## Solid-State Contactors

### SIRIUS 3RF23 solid-state contactors, single-phase

#### Selection and ordering data

##### Selection notes

The solid-state contactors are selected on the basis of details of the network, the load and the ambient conditions. As the solid-state contactors are already equipped with an optimally matched heat sink, the selection process is considerably simpler than that for solid-state relays.

The following procedure is recommended:

- Determine the rated current of the load and the mains voltage
- Select a solid-state contactor with the same or higher rated current than the load

## Solid-State Contactors

### SIRIUS 3RF24 solid-state contactors, three-phase

#### Overview

##### Three-phase solid-state contactors with heat sink

Their compact design with optimized heat sink enables small complete units with currents up to 50 A. They also offer all the

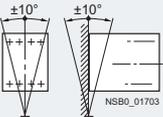

special features of the solid-state relay in terms of time and space savings.

#### Technical specifications

<sup>1)</sup> These products were built as Class A devices. The use of these devices in residential areas could result in radio interference. In this case the user may be required to introduce additional interference suppression measures. The versions 3RF24..-1AC55 comply with Class B for residential, business and commercial applications.

<sup>2)</sup> If two different conductor cross-sections are connected to one clamping point, both cross-sections must lie in one of the ranges specified.

## Solid-State Switching Devices for Resistive/Inductive Loads

### Function Modules

#### General data

#### Overview

##### Function modules for SIRIUS 3RF2 solid-state switching devices

A great variety of applications demand an expanded range of functionality. With our function modules, these requirements can be met really easily. The modules are mounted simply by clicking them into place; straight away the necessary connections are made with the solid-state relay or contactor.

The plug-in connection to control the solid-state switching devices can simply remain in use. The external connections have screw terminals.

The following function modules are available:

- Converters
- Load monitoring
- Heating current monitoring
- Power controllers
- Power regulators

With the exception of the converter, the function modules can be used only with single-phase solid-state switching devices.

##### Recommended assignment of the function modules to the 3RF21 single-phase solid-state relays

Type	Accessories

<sup>1)</sup> The technical specifications must be taken into account when selecting the function modules. More combinations may be possible if the solid-state relays and contactors are not fully loaded, e.g. a load monitor for 20 A can also be operated with a solid-state contactor for 30 A if the load current during operation does not exceed 20 A.

<sup>2)</sup> For line voltages in the range from 110 to 230 V, the versions of the 3RF29...0A13 function modules can also be combined with more voltage-resistant versions of the solid-state contactors (3RF23...-...4, -...5 or -...6).

## Solid-State Switching Devices for Resistive/Inductive Loads

### Function Modules

SIRIUS converters for 3RF2

#### Overview

##### Converters for 3RF2 solid-state switching devices

These modules are used to convert analog control signals, such as those output from many temperature controllers for example, into a pulse-width-modulated digital signal. The connected solid-state contactors and relays can therefore regulate the output of a load as a percentage.

#### Application

This function module is used for conversions from an analog input signal to an on/off ratio with time basis 1 s. The module can only be used in conjunction with 3RF21 and 3RF23 single-phase solid-state switching devices or 3RF22 and 3RF24 three-phase devices. It can be used on versions with 24 V DC and 24 V AC/DC control supply voltage.

##### Note:

The use of single-pole solid-state switching devices with converters, power controllers or power regulators on AC loads in full-wave control mode is not recommended. Since the function modules do not synchronize with each other, this may lead to fluctuations in the heating power; optimum compensation can no longer be ensured, especially for setpoints < 50%.

## Solid-State Switching Devices for Resistive/Inductive Loads

### Function Modules

#### SIRIUS load monitoring for 3RF2

##### Overview

##### Load monitoring for 3RF2 single-phase solid-state switching devices

Many faults can be quickly detected by monitoring a load circuit connected to the solid-state switching device, as made possible with this module. Examples include the failure of load elements (up to 6 in the basic version or up to 12 in the extended version), alloyed power semiconductors, a lack of voltage or a break in a load circuit. A fault is indicated by one or more LEDs and reported to the controller by way of a PLC-compatible output.

The principle of operation is based on permanent monitoring of the current intensity. This figure is continuously compared with the reference value stored once during commissioning by the simple press of a button. In order to detect the failure of one of several loads, the current difference must be 1/6 (in the basic version) or 1/12 (in the extended version) of the reference value. In the event of a fault, an output is actuated and one or more LEDs indicate the fault.

##### Application

The device is used for monitoring one or more loads (partial loads). The function module can only be used in conjunction with a 3RF21 solid-state relay or a 3RF23 solid-state contactor. The devices with spring-type terminals in the load circuit are not suitable.

# Solid-State Switching Devices for Resistive/Inductive Loads

## Function Modules

### SIRIUS heating current monitoring for 3RF2

#### Overview

##### Heating current monitoring for 3RF2 single-phase solid-state switching devices

Many faults can be quickly detected by monitoring a load circuit connected to the solid-state switching device, as made possible with this module. Examples include the failure of up to six load elements, alloyed power semiconductors, a lack of voltage, or a break in the load circuit. A fault is indicated by LEDs and reported to the controller via relay output (NC).

The principle of operation is based on permanent monitoring of the current intensity. This figure is continuously compared with the reference value stored once during commissioning. In order to detect the failure of one of several loads, the current difference must be 1/6 of the reference value. In the event of a fault, an output is actuated and the LEDs indicate the fault.

The heating current monitoring has a teach input and therefore differs from the load monitoring. This remote teaching function enables simple adjustment to changing loads without manual intervention.

#### Special version:

##### Deviations from the standard version

3RF29...-0JA1.-1KK0

If the current is below 50% of the lower teach current during the teach routine, the device will go into "Standby" mode; the LOAD LED will flicker. The device thus detects a non-connected load, e.g. channels not required for tool heaters, and does not signal a fault. This mode can be reset by re-teaching.

#### Application

The device is used for monitoring one or more loads (partial loads). The function module can only be used in conjunction with a 3RF21 solid-state relay or a 3RF23 solid-state contactor. The devices with spring-type terminals in the load circuit are not suitable.

## Solid-State Switching Devices for Resistive/Inductive Loads

### Function Modules

#### SIRIUS power controllers for 3RF2

##### Overview

##### Power controllers for 3RF2 single-phase solid-state switching devices

The power controller is a function module for the autonomous power control of complex heating systems and inductive loads. The following functions have been integrated:

- **Power controller**  
For adjusting the power of the connected load. The setpoint value is selected via a rotary knob on the module as a percentage of the 100% power value stored.
- **Inrush current limitation**  
With the aid of an adjustable voltage ramp, the inrush current is limited by means of phase control. This is useful above all with loads such as lamps or infrared lamps which have an inrush transient current.
- **Load circuit monitoring**  
For detecting load failure, partial load faults, alloyed power semiconductors, lack of voltage or a break in the load circuit.

##### Note:

With the phase control operating mode, a partial load fault is detected by cyclic "scanning" of the load; the exact mode of operation is described in the data sheets!

##### Special version: Deviations from the standard version

##### 3RF2904-0KA13-0KC0

During the teach routine, the connected solid-state relay or contactor is not activated; i.e. no current will flow. No current reference value is stored. No partial-load monitoring!

##### 3RF29...-0KA1.-0KT0

No partial-load monitoring!

##### Application

The power controller can be used for:

- Complex heating systems
- Inductive loads
- Loads with temperature-dependent resistor
- Loads with ageing after long-time service
- Simple indirect control of temperature

##### Power control

The power controller adjusts the power in the connected load by means of a solid-state switching device depending on the setpoint selection. It does not compensate for changes in the mains voltage or load resistance. The setpoint value can be predefined externally as a 0 to 10 V signal or internally by means of a potentiometer. Depending on the setting of the potentiometer ( $f_R$ ), the control is carried out according to the principle of full-wave control or generalized phase control.

##### Note:

In the case of ohmic loads, the power is set linear to the setpoint value. During operation of inductive loads, the power control is no longer proportional and linear due to the phase shift between current and voltage.

##### Full-wave control

In this operating mode the output is adjusted to the required setpoint value by changing the on-to-off period. The period duration is predefined at 1 s.

[See note about AC loads on page 6/133.](#)

##### Generalized phase control

In this operating mode the output is adjusted to the required setpoint value by changing the current flow angle. In order to observe the limit values of the conducted interference voltage for industrial networks, at loads up to 20 kVA, the load circuit must include an additional filter, and for loads above 20 kVA, a reactor with a rating of at least 200  $\mu$ H must be used. You will find details about the filters in the FAQ "Filters for 3RF29 power regulators and power controllers to comply with the limits for electromagnetic emitted interference":

<https://support.industry.siemens.com/cs/ww/en/view/109751887>.

# Solid-State Switching Devices for Resistive/Inductive Loads

## Function Modules

SIRIUS power regulators for 3RF2

### Overview

#### Power regulators for 3RF2 single-phase solid-state switching devices

The power regulator is a function module for the autonomous power control of complex heating systems.

The following functions have been integrated:

- **Power controller with proportional-action control**  
For adjusting the power of the connected load. The setpoint value is selected via a rotary knob on the module as a percentage of the 100% power value stored. Changes in the mains voltage or in the load resistance are compensated in this case.
- **Inrush current limitation**  
With the aid of an adjustable voltage ramp, the inrush current is limited by means of phase control. This is useful above all with loads such as lamps which have an inrush transient current.
- **Load circuit monitoring**  
For detecting load failure, alloyed power semiconductors, lack of voltage or a break in the load circuit. Partial load monitoring is not possible. Load fluctuations are compensated.

### Application

The power regulator can be used for:

- Complex heating systems
- Heating elements with temperature-dependent resistor
- Heating elements with ageing after long-time service
- Simple indirect control of temperature

### Power control

The power regulator adjusts the power in the connected load by means of a solid-state switching device depending on the taught power and the selected setpoint. Changes in the mains voltage or in the load resistance are thus compensated by the power regulator. The setpoint value can be predefined externally as a 0 to 10 V signal or internally by means of a potentiometer. Depending on the setting of the potentiometer ( $t_R$ ), the adjustment is carried out according to the principle of full-wave control or generalized phase control.

#### Note:

In the case of ohmic loads, the power is set linear to the setpoint value. During operation of inductive loads, the power control is no longer proportional and linear due to the phase shift between current and voltage.

### Full-wave control

In this operating mode the output is adjusted to the required setpoint value by changing the on-to-off period. The period duration is predefined at 1 s.

See note about AC loads on page 6/133.

### Generalized phase control

In this operating mode the output is adjusted to the required setpoint value by changing the current flow angle. In order to observe the limit values of the conducted interference voltage for industrial networks, at loads up to 20 kVA, the load circuit must include an additional filter, and for loads above 20 kVA, a reactor with a rating of at least 200  $\mu$ H must be used. You will find details about the filters in the FAQ "Filters for 3RF29 power regulators and power controllers to comply with the limits for electromagnetic emitted interference":

## Solid-State Switching Devices for Switching Motors

### Solid-State Contactors

#### General data

#### Overview

##### More information

Homepage, see [www.siemens.com/solid-state-switching-devices](http://www.siemens.com/solid-state-switching-devices)  
 Industry Mall, see [www.siemens.com/product?3RF](http://www.siemens.com/product?3RF)

Online configurator, see [www.siemens.com/sirius/configurators](http://www.siemens.com/sirius/configurators)

#### Solid-state contactors for switching motors

Solid-state contactor for direct-on-line starting

The solid-state contactors for switching motors are intended for frequently switching on and off three-phase current operating mechanisms up to 7.5 kW and reversing up to 3.0 kW. The devices are constructed with complete insulation and can be mounted directly on SIRIUS motor starter protectors, overload relays and current monitoring relays, resulting in a very simple integration into motor feeders.

These three-phase solid-state contactors are equipped with a three-phase control which is particularly suitable for typical motor current circuits without connecting to the neutral conductor.

Important features:

- Insulated enclosure with integrated heat sink
- Degree of protection IP20
- Integrated mounting foot to snap on a standard mounting rail or for assembly onto a support plate
- Variety of connection methods
- Plug-in control connection
- Display via LEDs
- Wide voltage range for AC control supply voltage

#### Switching functions

The solid-state contactors for switching motors are "Instantaneous switching", because this method is particularly suited for inductive loads. By distributing the ON point over the entire sine curve of the mains voltage, disturbances are reduced to a minimum.

#### Connection methods

You can choose between the following connection methods for the solid-state contactors for switching motors:

##### Screw terminals

The screw connection system is the standard among industrial controls. Open terminals and a plus-minus screw are just two features of this technology. Two conductors of up to 6 mm<sup>2</sup> can be connected in just one terminal.

##### Spring-type terminals

This innovative technology manages without any screw connection. This means that very high vibration resistance is achieved. Two conductors of up to 2.5 mm<sup>2</sup> can be connected to each terminal.

#### Motor feeders

The devices can use a link module to directly connect to a motor starter protector. Also possible is the mounting of a 3RB30/3RB31 electronic overload relay (see page 7/98) or a 3RR2 current monitoring relay (see pages 10/62 and 10/70) using a link adapter. The simultaneous mounting of a motor starter protector and an overload or current monitoring relay is not recommended for space and heat development reasons.

Rapid-switching fuseless and fused motor feeders can thereby be implemented in a time-saving manner.

#### Selecting solid-state contactors

The solid-state contactors are selected on the basis of details of the network, the load and the ambient conditions.

The following procedure is recommended:

- Determine the rated current of the load and the mains voltage
- Select a solid-state contactor with the same or higher rated current than the load
- Testing of the maximum permissible switching frequency based on the characteristic curves (see "More Information" → "Product Information"). To do this, the starting current, the starting time and the motor loaded in in the operating phase must be known.
- If the permissible switching frequency is under the desired frequency, it is possible to achieve an increase only by overdimensioning the motor and the solid-state contactor!

Alternatively, the tool for "Selection of solid-state contactors for switching motors" can be used. The correct device size can be determined by entering the network and motor data along with the application and ambient conditions, see [www.siemens.com/solid-state-switching-devices](http://www.siemens.com/solid-state-switching-devices).

#### Short-circuit protection

Despite the rugged power semiconductors that are used, solid-state switching devices respond more sensitively to short circuits in the load feeder. Consequently, special precautions have to be taken against destruction, depending on the type of design.

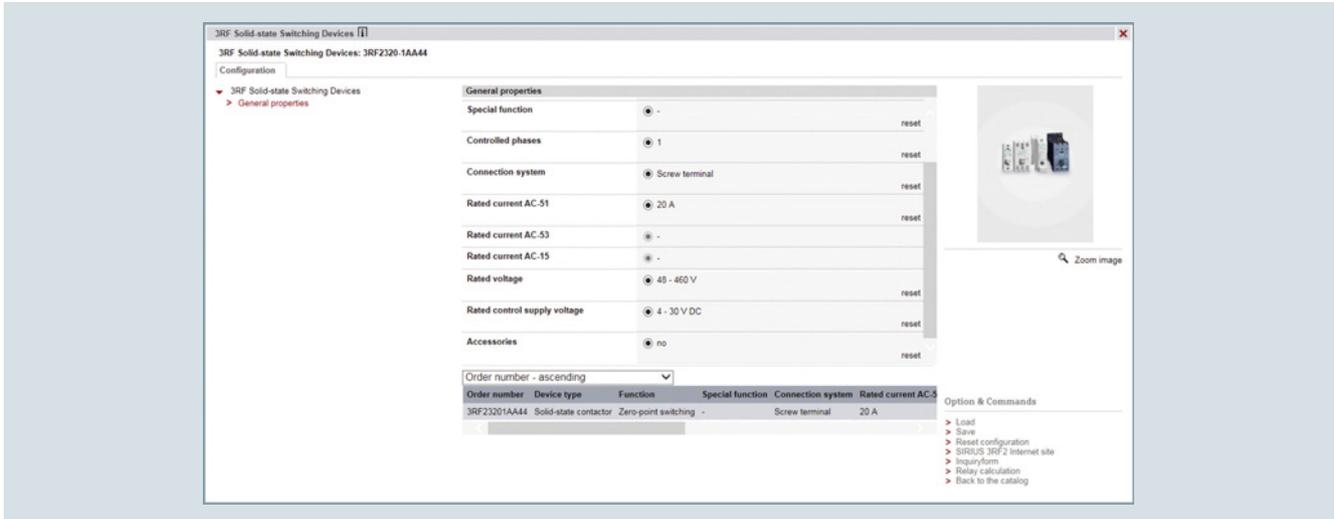

Siemens generally recommends using SITOR semiconductor fuses. These fuses also provide protection against destruction in the event of a short circuit even when the solid-state contactors and solid-state relays are fully utilized.

Alternatively, if there is lower loading, protection can also be provided by standard fuses or miniature circuit breakers. This protection is achieved by overdimensioning the solid-state switching devices accordingly.

### Online Configurator

- Simple selection of individual solid-state switching devices by means of technical characteristics (e.g. zero-point switching, spring-type terminal and rated current)
- Once configuration is complete, you receive the article numbers corresponding to the products.

see  
[www.siemens.com/sirius/configurators](http://www.siemens.com/sirius/configurators)

## Solid-State Switching Devices for Switching Motors

### Solid-State Contactors

#### General data

##### Benefits

- Units with integrated heat sink, "ready to use"
- Compact and space-saving design
- Reversing contactors with integrated interlocking

##### Application

###### *Use in load feeders*

There is no typical design of a load feeder with solid-state relays or solid-state contactors; instead, the great variety of connection methods and control voltages offers universal application opportunities.

SIRIUS solid-state relays and solid-state contactors can be installed in fuseless or fused feeders, as required.

See Configuration Manual "Load Feeders – Configuring the SIRIUS Modular System – Selection Data for Fuseless and Fused Load Feeders",  
<https://support.industry.siemens.com/cs/ww/en/view/39714188>.

###### *Standards and approvals*

- IEC 60947-4-2
- UL 508, CSA for North America<sup>1)</sup>
- CE marking for Europe
- C-Tick approval for Australia
- CCC approval for China

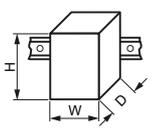

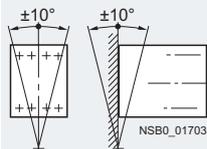

<sup>1)</sup> Please note: Use overvoltage protection device;  
 max. cut-off-voltage 6 000 V;  
 min. energy handling capability 100 J.

## Solid-State Switching Devices for Switching Motors

### Solid-State Contactors

#### SIRIUS 3RF34 solid-state contactors, three-phase

##### Overview

These three-phase controlled, instantaneous switching solid-state contactors in the insulating enclosure are offered in a width of 45 mm up to 5.2 A – and in a width of 90 mm up to 16 A. They allow the operation of motors up to 7.5 kW.<sup>1)</sup>

<sup>1)</sup> In accordance with the product standard IEC 60947-4-2, the motor contactors are designed for motors with maximum starting current conditions of  $I/I_e \leq 8$ .

For configuring motors with higher starting current conditions (typically  $I/I_e \geq 8$ ) the data in the manual "SIRIUS – 3RF34 Solid-State Switching Devices" must be taken into account, see

<https://support.industry.siemens.com/cs/ww/en/view/60298187>.

## Solid-State Switching Devices for Switching Motors

### Solid-State Contactors

#### SIRIUS 3RF34 solid-state reversing contactors, three-phase

##### Overview

The integration of four conducting paths to a reverse switch, combined in one enclosure makes this device a particularly compact solution. Compared to conventional systems, for which two contactors are required, it is possible to save up to 50%

in width with the three-phase reversing contactors. Devices with a width of 45 mm cover motors up to 2.2 kW – and those with a width of 90 mm cover motors up to 3 kW.<sup>1)</sup>

<sup>1)</sup> In accordance with the product standard IEC 60947-4-2, the motor contactors are designed for motors with maximum starting current conditions of  $I/I_e \leq 8$ . For configuring motors with higher starting current conditions (typically  $I/I_e \geq 8$ ) the data in the manual "SIRIUS – 3RF34 Solid-State Switching Devices" must be taken into account, see <https://support.industry.siemens.com/cs/ww/en/view/60298187>.

<b>Power loss at <math>I_{AC-53a}</math></b>				
• At 40 °C	W	7 (6)	9 (8)	13
<b>Short-circuit protection with type of coordination "1"</b> at operational voltage $U_e$ up to 440 V				
• Motor starter protector, type		3RV2011-1FA10	3RV2011-1GA10	3RV2011-1JA10
• Current $I_q$	kA	50		10

<sup>1)</sup> The reduced values in brackets apply to a directly mounted motor starter protector and simultaneous side-by-side mounting.

Type		3RF3403-.BD.4	3RF3405-.BD.4	3RF3410-.BD.4
<b>Fused design with directly connected 3RB3 overload relay</b>				
<b>Rated operational current <math>I_{AC-53a}</math></b> acc. to IEC 60947-4-2				
• At 40 °C	A	3.8	5.4	7.4
• UL/CSA, at 50 °C	A	3.5	5	6.8
• At 60 °C	A	3.2	4.6	6.2
<b>Power loss at <math>I_{AC-53a}</math></b>				
• At 40 °C	W	6	8	16
<b>Minimum load current</b>	A	0.5		
<b>Max. off-state current</b>	mA	10		
<b>Rated peak withstand current <math>I_{tsm}</math></b>	A	200	600	
<b><math>I^2t</math> value</b>	A <sup>2</sup> s	200	1 800	

## Solid-State Switching Devices for Switching Motors

### Solid-State Contactors

#### SIRIUS 3RF34 solid-state reversing contactors, three-phase

Type	<b>3RF34...BD.4</b>	
<b>Main circuit</b>		
<b>Controlled phases</b>	Three-phase	
<b>Rated operational voltage <math>U_e</math><sup>1)</sup></b>	V AC	48 ... 480
• Operating range	V AC	40 ... 506
• Rated frequency	Hz	50/60 ± 10%
<b>Rated insulation voltage <math>U_i</math></b>	V	600
<b>Rated impulse withstand voltage <math>U_{imp}</math></b>	kV	6
<b>Blocking voltage</b>	V	1 200
<b>Rate of voltage rise</b>	V/μs	1 000

<sup>1)</sup> To reduce the risk of a phase short circuit due to overvoltage, we recommend using a varistor type 3TX7462-3L between the phases L1 and L3 as close as possible to the switchgear.

We recommend a design with semiconductor protection as short-circuit protection.

Type	<b>3RF34...BD0.</b>	<b>3RF34...BD2.</b>
<b>Control circuit</b>		
<b>Method of operation</b>	DC operation	AC operation
<b>Rated control supply voltage <math>U_s</math></b>	V	24
<b>Rated frequency of the control supply voltage</b>	Hz	--
<b>Control supply voltage, maximum</b>	V	30
<b>Typical actuating current</b>	mA	15
<b>Response voltage</b>	V	15
<b>Drop-out voltage</b>	V	5
<b>Operating times<sup>1)</sup></b>		
• ON-delay	ms	5
• OFF-delay	ms	5 + max. one half-wave
• Interlocking time	ms	60 ... 100

<sup>1)</sup> Notice! Risk of phase short circuit in automatic mode. The control inputs must not be actuated until a delay of 40 ms has expired after the main voltage is applied.
